SNOW & ICE CONTROL

The Winter Challenge

Living in Grandview, Washington, we all know the weather can be very unpredictable. We have experienced winters (normally months of November, December, January and February) with little to no snow accumulation, to winters with several feet of measurable snow accumulation. Along with frosty winter temperatures, snow and ice can be challenging for residents and the City crews to control. With a population of over 12,000 and over 60 lane miles of streets, the City continues to strive to provide an acceptable level of snow and ice control.

SNOW REMOVAL

Snow Removal from the Streets

- The City is devoted to keeping our streets as safe as possible, within a limited budget. Prior to a major snow or freezing rain event, the City will attempt to spread sand and salt, as well as deicing material on all major arterial streets. Other priority locations include streets near our public safety facilities, schools, clinics and hills.
- When snow accumulations reach at least three inches, the City will begin to plow the major arterial streets, and the streets near schools, clinics, public safety facilities (fire & police stations), intersections, and hills.
- The City's Snow Removal Map indicates which streets are Priority 1, see attachment 1. Residential and non-arterial streets are not plowed until all Priority 1 streets are completed.
- Under normal conditions, the City will plow snow to the right (towards the curb). Although, when snow accumulations are significant and the forecast calls for additional snow, City crews may plow the snow to the center of the roadway (wind rowing), if possible. Snow plowing methods are at the discretion of the Public Works Director.
- Depending on the severity of the storm, it may take several hours to several days or weeks for roadways to return to normal. In the aftermath of the storm, be patient, self-sufficient and travel only if it is absolutely necessary.
- During a major snow event, the City may also utilize contract labor to assist in responding to snow and ice control.

Homeowner/Business are Responsible for Cleaning their Own Sidewalks

- Removal of snow from sidewalks along your home and business is a responsibility of all citizens. The best time to shovel snow is immediately after it falls and before ice can begin to form.
- After you clear the sidewalk of snow, you may choose to apply an ice-melting substance. The City recommends using calcium chloride, (sometimes called "hot melt") rather than sodium chloride (rock salt) because it is less damaging to sidewalks and plants. Also, it works at a much lower temperature, so it is more effective in freezing conditions.
- If your home or business is on a corner, please remove the snow from the sidewalk ramps so children and other pedestrians can cross the street.
- Dig out fire hydrants for your safety and the safety of your neighbors.
- If your neighbors are elderly, disabled or have other special conditions that make snow removal hazardous, please be a good neighbor and help clean the snow and/or ice for them.
- If you can afford one, buy a snow blower and help your neighbors. Make sure you blow the snow into your yard and not the street.

Please don't take it personally

- Equipment operators may work 12 hours or more in a shift and appreciate courteous and friendly drivers and pedestrians. **Please help them help you.**
- Pushing snow into a driveway opening or along a car parked on the street is often unavoidable as City crews work to keep streets passable.
- Do not throw snow from your sidewalk or driveway into the street - **it is your snow and it must stay on your property.**
- To avoid having snow covering your driveway from the City plows, shovel your snow to the right of your driveway into your yard and not into the street.

SNOW TIPS

Snow tips for residents

- Put "Safety First" and drive only if necessary. Dress warmly and be prepared for travel delays. Make sure you carry blankets, flashlights, water and other emergency provisions.
- Try to keep your vehicle off the street. If you must park on the street, park as close to the curb as possible.
- **Do not follow a snowplow or sanding truck too closely. They may stop suddenly or spray sand, rocks or other material.**
- Do not sled on streets or sidewalks.
- Before traveling, pay close attention to weather forecasts and, if possible, please stay off roads and sidewalks when snow, sleet or freezing rain is forecast.
- For storm information concerning school and business delays or closing, please tune in to local television and/or radio stations.

Take it slow

Protect yourself and your passengers. Allow extra time to reach your destination during inclement weather. Do not be the driver who has or causes an accident.

- Drive for conditions - slower speeds, slower acceleration, slower steering and slower braking in winter conditions.
- Use your headlights.
- Do not use cruise control.
- Four-wheel and all-wheel drive vehicles will not stop or steer any better in icy conditions.
- Leave extra room between your vehicle and the vehicle in front of you. Please remember, larger vehicles and big trucks take longer to stop.
- Slow down when approaching intersections, hills, bridges or shady spots.
- Brush the snow off your vehicle, especially your lights, before you drive. It makes you more visible, plus snow and ice flying off a vehicle can be dangerous to other drivers. Every year drivers get into accidents because they fail to properly clear their windows of ice.
- If you find yourself behind a snowplow, stay behind it until it is safe to pass. Remember that a snowplow driver has a limited field of vision. Stay back (50-feet) until you are sure it is safe to pass or until the plow pulls off the road.

Prepare your vehicle for winter

If you absolutely have to travel, making sure your vehicle is prepared in advance to avoid unnecessary delays. Make an annual checklist to review in October with the following items:

- Tune-Up
- Brakes
- Antifreeze
- Belts, hoses, filters and oil.
- Battery
- Any leaks
- Lights
- Windshield wipers
- Windshield washer fluid
- Fuel level
- Heater/defroster function
- Ice scraper
- Blankets
- Bag of sand or kitty litter
- Cell phone and charger
- Proper tires and inflation
- Chains (Talk to your local tire dealer about which chains are the best fit for your vehicle and practice installing them)
